

Air traveling through a ducting system moves very efficiently until it hits resistance. The vent cover has a level of resistance as it forces the air out through the slits in the vent. When this air ...

Room Ventilation Ventilating a blast room can be done by three different methods of air-flow design. The three air-flow designs are "down-draft", "end-to-center" and "cross-draft" ...

The patented aluminized-steel tubular heat exchanger and durable hot-surface ignition system combined with the heavy-gauge, reinforced, insulated steel cabinet and durable baked enamel ...

First Example: External Temperature < 30°C - Packaging IndustrySecond Example: External Temperature > 30°C - Steel IndustryGet Started with Thermal ManagementThese two examples - using the same architecture and equipment but with different external environments and temperature conditions - illustrate that finding the right thermal solution depends on a detailed evaluation of all operating variables. That is why thermal management software is valuable for analyzing the external environment (e.g., tempera...See more on blog.se Missing: steel cabinetMust include: steel cabinetnVentEnclosure Air Conditioners | nVent HOFFMANOur broad portfolio of reliable, energy-efficient enclosure air conditioners keeps your electrical equipment cool and your business running in virtually any environment.
