

How does Stockholm's energy supply cope with a power shortage?

The energy supply in the Stockholm metropolitan region is already facing significant challenges with increasing power shortages. To meet the region's needs, the energy company Stockholm Exergi and the power operator Polar Capacity are now investing together to build large-scale battery parks with a combined minimum power of 100 MW.

What is Stockholm Exergi doing with Polar Capacity?

Facts about the collaboration: Stockholm Exergi and Polar Capacity have agreed to form a joint venture to build and install large-scale battery parks in the Stockholm metropolitan area. The goal is to establish a minimum of at least 100 MW, and the first battery park of 20 MW will be ready in 2023. Stockholm Exergi is Stockholm's energy provider.

Where are Stockholm Exergi & Polar Capacity batteries now?

October 10, 2023 All eight batteries are now in place at Stockholm Exergi and Polar Capacity's battery park in Haninge. The park is one of Sweden's largest, and when operational, it will add a total of 20 MW to the electrical system--a much-welcomed addition for a continued secure and reliable power supply in the Stockholm region.

What does Stockholm Exergi do?

Stockholm Exergi is one of the first companies in the world to develop a model for enabling the shift from reduced carbon dioxide emissions to negative emissions. As part of its research and development activities, Stockholm Exergi is working on how BECCS can make a substantive contribution to supporting national and international climate goals.

What is Sweden's smart energy ecosystem?

Sweden's Smart Energy ecosystem brings together leading suppliers of smart grids, district heating and cooling, and innovative solutions for energy storage. These key players are on a mission to speed up the transition to clean electricity and carbon neutrality - in Sweden and globally.

Why did Stockholm Exergi invest in a large-scale research facility?

In December 2019, we inaugurated our research facility. The goal is that the research facility, together with an ongoing integration study, will provide sufficiently robust results to form the basis for Stockholm Exergi to invest in a large-scale facility. BECCS is a more cost-effective technology for reducing carbon dioxide than many alternatives.

Benefits of Battery Energy Storage Systems. Battery Energy Storage Systems offer a wide array of benefits, making them a powerful tool for both personal and large-scale use: Enhanced ...

Stockholm Exergi has several waste and biofuel incineration plants in Stockholm. In total, Stockholm Exergi's plants produce a total of 2,138 GWh of energy (electricity and heat) from waste, where the recycled energy benefits both the ...

Introduction of hydrogen production, storage and utilization as green energy-carrier. Lab. Five lab experiments (each full day labs) designed to conduct renewable energy generation (e.g. sun ...

The electricity network company Ellevio is diversifying its business to help industry and companies become fossil-free through electrification. The first investment is Sweden's largest Battery Energy Storage Solution (BESS) that ...

Ingrid Capacity is an energy tech company specializing in flexible assets and energy storage in Europe. We enhance grid utilization and stability and enable the electrification of society, a prerequisite for the green transition. ... 111 60 ...

The first facility, with a capacity of 20 MW, is set to be completed by 2023. The two companies are forming a jointly owned subsidiary that will construct battery parks to provide power and support services, ...

The energy supply in the Stockholm metropolitan region is already facing significant challenges with increasing power shortages. To meet the region's needs, the energy company Stockholm Exergi and the power ...

Benefits with battery storage. Building electricity grids takes time and a long-term work with long permit processes before the process can start. Battery storage is faster to build and is one of ...
