After the discovery of the short pulsed electric arc in 1801 by Humphry Davy [2] [3] and of the continuous electric arc in 1802 by Vasily Petrov, [3] [4] arc welding developed slowly. C. L. Coffin had the idea of welding in an inert gas ...

I am not saying there is one arc length that works best for everyone because I have seen really good welders use a much longer arc than me with great results...and results are hard to argue with. I remember one particular job in ...

Welding arc length is an important factor in determining the overall efficiency of the welding process. The arc length voltage characteristic of a DC arc is given by the equation $V = 24 + 4L$, where V is the arc voltage and L ...
