

The Sunny Boy Storage battery inverter has been precisely engineered to serve as the intelligent interface between PV, the electrical grid and industry-leading high-voltage batteries.

Why was the charge/discharge power on the Sunny Boy Storage set to 2.5 kilowatts and not to 3.3 kilowatts as on the Tesla battery? The battery inverter power should only be 30% to 50% of the photovoltaic inverter power. This is enough to temporarily store 99% of the excess PV current in the battery, even with a feed-in limitation of 50%.

My wholesaler has said that currently multiple Sunny Boy Smart Energy inverters can not be installed in parallel. This is apparently due to the Sunny Home Manager. Is that right? No more than one Sunny Boy Smart Energy inverter can be connected in parallel.

The Sunny Boy Storage meets the requirements for the energy storage subsidy. However, you would have to ask Tesla about the battery's eligibility. 5.
