

How much power does Litgrid have in Lithuania?

This is almost as much as the total installed electric power in Lithuania - 3,800 MW. Litgrid can also connect 1,400 MW of wind farms in the Baltic Sea to the system, which would further increase the generation of renewable sources.

How does Litgrid achieve energy independence?

Litgrid also seeks Lithuania's energy independence by synchronizing the country's electricity system with the Continental European Synchronous Area. After the completion of this project in 2025, after more than 80 years Lithuania will again manage the frequency of the electricity system.

How does Litgrid plan expansion?

Litgrid plans expansion by focusing on several key areas. One of the most important is to fight climate change by developing and adapting the transmission system to increasing production of electricity from renewable sources and reducing the impact of Litgrid own infrastructure.
