

Can Suriname support a grid integration of wind power?

Suriname's hydropower plant can support substantial grid integration of wind power. Thermal power could be cost-effectively displaced by hydro-supported wind power. Suriname could, on average, reach 20%-30% penetration of hydro-supported wind power. Such strategies could benefit various island states and regions with isolated grids.

Does Suriname have a synergetic hydro-wind-solar grid?

Given the island-like nature of Suriname's main grid, these methods and results also provide starting points for investigating comparable synergetic hydro-wind-solar planning in several other Caribbean countries and island states.

How much wind power does Suriname need?

A penetration of at least 23% of wind power in the electricity mix would therefore be technically feasible and economically advantageous for Suriname under the above assumptions, even without demand response and storage measures. 4.3. Sensitivity analysis

Could a new wind turbine be installed in Suriname?

As potential wind turbine deployment in Suriname would presumably happen in stages, the costs for each consecutive project could realistically be lower than for preceding projects as technology progresses and wind turbines with higher hubs (reaching higher capacity factors) become cheaper, allowing for penetration rates potentially beyond 30%.

Is solar power more flexible than wind power in Suriname?

However, two factors lead us to conclude that in Suriname's specific case, wind power is a more obvious candidate to be supported by hydro-driven flexibility than solar power.

Is coastal wind power a No-Regret option for Suriname?

We therefore conclude that planning for the deployment of coastal onshore wind power, with up to at least ~ 200 MW of total capacity given current demand levels, represents a no-regret option for Suriname.

The integrated energy storage system will improve efficiency at the gold mine's power station by reducing the need for emergency back-up spinning reserve, therefore lowering fuel consumption. The project is ...

The new power system is faced with 5 challenges, namely the green energy structure, flexible power grid regulation, interactive power consumption mode, energy-storage collaborative interaction with extensive distribution on the ...

The second phase of the contracted Suriname village micro-grid photovoltaic project includes: the design, procurement and construction of 5 centralized micro-grid photovoltaic power stations in the inland area of ...

The second phase of the Suriname Village Microgrid Photovoltaic Project is an off-grid microgrid project that combines photovoltaic, energy storage, and diesel generation hybrid energy. A total of five project groups covering 34 ...

The contract represents W&#228;rtil&#228; Energy's first energy storage project in Suriname, and the first utility-scale energy system to be built in that country. The project will include the supply of W&#228;rtil&#228;'s GridSolv Quantum, a fully ...

Turkey Solution Provider for Hybrid Solar Power Plant. SINOSOAR is proud of its sophisticated R& D team, the self-developed SP Series Battery Inverter, and Energy Storage Series, Energy ...

A mining company based in Suriname has selected technology firm W&#228;rtil&#228; for the supply of an energy storage system as part of its sustainability strategy. W&#228;rtil&#228; will provide a 7.8MW/7.8MWh energy storage ...
