

Where are solar power plants located in Kazakhstan?

In 2019, Nurgisa solar power plant with a capacity of 100 MW in Kapshagay, Almaty region started its operation (informburo.kz, 2019). In 2019, another solar power plant in Kazakhstan, Saran, with a capacity of 100 MW started its operation in the Karaganda region (Satubaldina, 2020).

Is solar energy a viable energy source in Kazakhstan?

In 2019, another solar power plant in Kazakhstan, Saran, with a capacity of 100 MW started its operation in the Karaganda region (Satubaldina, 2020). According to the International Energy Agency (IEA), within the period of 40 years, solar energy has a potential to meet about 20-25% of the energy demand of the country.

What is Kazakhstan's First Solar power plant?

The plant is to produce solar cells using Kazakhstan's silicon. The designed capacity of photovoltaic wafers is 50 MW with a potential to increase up to 100 MW. In 2012, the first solar power station, "Otar," that generates 0.5 MW of energy, was also built in the Zhambyl region.

How much solar power does Kazakhstan have?

In just five short years, solar power capacity has catapulted to 300 megawatts nationwide, and if you add other renewables like wind and hydropower, that number exceeds 700 megawatts, enough power to supply around 200,000 families in Kazakhstan. To understand just how remarkable this is, you have to know the context.

Is Kazakhstan a good place to invest in solar power?

Kazakhstan has remarkable solar potential with a very well-designed auction system, a clear renewable capacity addition schedule, and a solid decarbonisation target. The country is now also including storage systems as part of its public procurement strategy in a move that will ease further integration of renewables into the grid.

What is Astana solar?

In this light, recently "Astana Solar" plant aimed at the production of photovoltaic modules was launched in Nur-Sultan. The plant is to produce solar cells using Kazakhstan's silicon. The designed capacity of photovoltaic wafers is 50 MW with a potential to increase up to 100 MW.
