

As far as ubiquitous movements go, the SW200 and its variants is one to make your eyes light up when you see it on a specification sheet. Originally a clone of the ever-loved ETA 2824, once the patent had expired, Sellita's version remains just as reliable, affordable and well-performing as its ETA twin.

Setting the time on a watch powered by the Sellita SW200 involves: Pull the crown out to the second position. Turn the crown to set the time. Push the crown back in to start the movement. The Sellita SW200 movement is built with 26 jewels to minimize friction and wear, enhancing its durability.

Oris Aquis Date: This popular dive watch features the SW200 movement for its reliability and precision. Tag Heuer Formula 1: A sporty model that benefits from the robustness of the SW200. Baume & Mercier Clifton: This elegant timepiece is powered by the SW200, offering both style and performance.
