

What is Sweden's largest energy storage investment?

Sweden's largest energy storage investment, totaling 211 MW, goes live, combining 14 sites. 14 large-scale battery storage systems (BESS) have come online in Sweden to deploy 211 MW / 211 MWh into the region.

What will a battery storage system do for Sweden?

The battery storage system will provide grid balancing services like frequency response, energy trading services on the market, and local flexibility services to help distribution system operators (DSOs) optimise the local grid. Electricity demand is also set to grow substantially in Sweden as the country electrifies industries like transportation.

How will Sweden's second-largest battery storage system be built?

The fund will provide the financing needed to build Sweden's second-largest battery storage system. Within 12 months, 13 local battery storage systems with a total capacity of nearly 200 megawatts will be connected to the local grids, adding necessary flexibility to the system by participating on the grid frequency control market.

Why did we choose BW energy storage systems?

We have chosen BW Energy Storage Systems because of their expertise in energy systems and our shared long-term view on the necessary developments needed to secure the functionality of our national grids. This makes them an excellent partner at this stage of Ingrid Capacity's development". Says Ibrahim Baylan, board member of Ingrid Capacity.

Why is energy storage important?

Energy storage is an essential and indispensable element in the green transition to renewable energy, as it plays a crucial role in ensuring grid stability, enabling the integration of intermittent renewable sources, and ultimately reducing greenhouse gas emissions both on a national and international level.

How will electricity demand change in Sweden in 2040?

Electricity demand is also set to grow substantially in Sweden as the country electrifies industries like transportation. Local grid operator Karlshamn Energi said the locality has no current capacity problems but expects the peak power requirement to nearly double from 22MW to 38-40MW in 2040.

Sweden's largest battery storage - a front-edge project to meet increasing electricity demand Many cities around the world are growing rapidly, which increases the need for electricity. In ...

The first two energy storage facilities in the Marviken Smart Energy Cluster have been connected to the electricity grid to improve the energy system and ensure a reliable energy supply. The Swedish electricity grid faces challenges regarding ...

Swedish energy storage company Ingrid Capacity, the market leader in the Nordics, secures approx. SEK 1bn of investments from BW Energy Storage Systems (BW ESS), a part of BW Group, to accelerate growth and ...

A battery storage subsidiary of maritime company BW Group has committed to investing in Swedish energy storage developer Ingrid Capacity. Ingrid Capacity said this morning it had secured "around SEK1 billion ...

Ingrid Capacity and BW ESS - who jointly build energy storage at critical locations in the electricity grid - is now entering the final stage for six facilities at different ...

The two largest operational units in Sweden are Vattenfall's 5MW/20MWh system in Uppsala and Primrock's 5.4MW unit in Falkenberg while Alfen is delivering a 10MW/11.9MWh system for electricity network company ...

In the city of Uppsala, Sweden, a possible solution is being developed, piloting one of Sweden's largest battery storages to meet the increased demand, enable continued expansion and ...

Independent power producer (IPP) Neoen and system integrator Nidec have started construction on a 93.9MW/93.9MWh battery energy storage system (BESS) in Sweden, the largest in the country. Paris-headquartered ...

"This second collaboration with Ingrid Capacity represents a substantial expansion of our energy storage asset base in Sweden, in a move that solidifies our dedication to supporting Swedish ...
