

What is Thailand's battery recycling initiative?

This initiative represents a significant step towards reducing battery waste and reintegrating valuable materials into the economy, marking a milestone in Thailand's commitment to a sustainable future.

Will Thailand bring EV battery production to the country?

Thailand are in talks with CATL to bring EV battery manufacture to the country. Credit: Sergii Chernov. The government of Thailand has started negotiations with China's Contemporary Amperex Technology Co (CATL) aiming to incentivise battery production to the country. Are your battery recycling initiatives going far enough?

Can EV batteries be recycled?

The European Union has stringent laws regarding LIB recycling: efficiency should reach 50% by 2030. Meanwhile, China stamps specific ID to EVs which will help track the batteries up to recycling.

What is the Circular Economy Initiative through battery recycling project?

The 'Circular Economy Initiative through Battery Recycling Project' utilises a high-efficiency ECOARC(TM) Furnace to melt batteries into various materials. This Japanese-developed prototype furnace prioritises energy-saving, environmental concerns, pollution treatment, and dioxin elimination before release.

Should battery recycling be a major part of the supply chain?

The battery energy storage market is estimated to be worth over US\$10 billion by 2026 but lithium - the main component - is a finite resource. To prevent shortages, it must be deployed with care. New technologies are maximising efficiencies, but battery recycling should be seen as a major part of the supply chain.

Is Thailand a good place to buy EVs?

Thailand was noted as an EV market of heavy growth and potential by the International Energy Agency in April. In 2021, Taiwan's Foxconn partnered with Thailand's state-owned energy firm PTT in a \$1.04bn joint venture to produce EVs in the country.

Effective battery recycling management as the mainstay of the future energy transition is absolutely needed to address sustainability concerns. Ever-growing concerns of greenhouse gas emissions (GHG) and incremental ...

As batteries proliferate in electric vehicles and stationary energy storage, NREL is exploring ways to increase the lifetime value of battery materials through reuse and recycling. NREL research ...

The Thailand Lithium-ion Battery Recycling market confronts challenges linked to the increasing adoption of electric vehicles and renewable energy storage. Establishing efficient and ...

Local governments have also started to promote the NEV battery recycling sector. In one such example, the province of Jiangsu has set up 907 NEV battery recycling centres. Shanghai has initiated a full life cycle ...

Every month, up to 5 tons of primary batteries, mainly zinc-carbon and alkaline batteries, are discarded in Bangkok. Handling spent zinc carbon and alkaline batteries presents significant challenge as the current ...

A rapid growth in electric vehicles has led to a massive number of retired batteries in the transportation sector after 8-10 years of use. However, retired batteries retain ...

ACE Green Recycling is an innovative battery recycling technology platform offering sustainable end-of-life solutions. It has deployed modular, Scope 1 emissions-free recycling plants for Lithium (NMC & LFP) and Lead batteries ...

Battery Recycling: Crucial Component for Energy Storage's Circular Economy. By Justin Sitohang and Zulfikar Yurnaidi. Tuesday, 18 Aug 2020. Roles of Battery in Sustainable Development. Ever-growing concerns of ...

Panasonic Energy (Thailand) Co., Ltd. (PECTH) and CP All Public Company Limited (CP All) join hands to promote a circular economy approach through Battery Collection for recycle through 7-Eleven stores. This partnership marks ...

Chinese battery manufacturer Gotion High-Tech has continued recent moves into new markets across Asia, signing a deal with Japan's Edison Power. The two companies will target growing demand in the Japanese ...
