

Sustainable Energy, Grids and Networks. Volume 39, September 2024, 101485. Coordination of medium-voltage distribution networks and microgrids based on an aggregate flexibility region approach. Author links open overlay panel Maoyi Zhou a, Sheng Chen a, Kun Huang b, Jiaben Liang b, Ming Fu b, Guoqiang Sun a. Show more.

This special issue aims to identify, address and disseminate state-of-the-art research works focusing on the advanced technology and application for integrated multi-energy conversion, control, and operational planning toward the low carbon emission-driven self-sustained EV charging infrastructure.

Energy grids and networks articles ... Carbon emissions of power transmission and transformation projects in the whole life cycle for smart sustainable energy systems. ... Clinton Thai & Jack ...

This strategic shift towards sustainable energy sources like solar, wind, and biomass, fostered by the PDP and the AEDP, positions Thailand as a regional leader in renewable energy. The country's evolving energy mix ...

A Case of Thailand Microgrids. The Thailand energy sector has evolved into a modern infrastructure, supporting several national social and economic activities as well as realizing environmental concerns. At a national level, renewable energy promotion has been in a Thailand energy development plan for more than a decade (EPPO, 2019e). The ...

Smart grid technology is the key for an efficient use of distributed energy resources. Noting the climate change becomes an important issue the whole world is currently facing, the ever increasing price of petroleum products and the reduction in cost of renewable energy power systems, opportunities for renewable energy systems to address electricity ...

Electricity Grids and Secure Energy Transitions Executive summary PAGE | 7 IEA. CC BY 4.0. Executive summary Modern, smart and expanded grids are essential for successful energy transitions The backbone of today's electricity systems, grids are set to become increasingly important as clean energy transitions progress, but they

Sustainability is the essential part of smart grids and the ultimate future of energy systems. Providing a state-of-the-art review on the progress of advanced learning systems which contribute to the sustainability of smart grid is essential. This paper reviews the applications of data-driven methods of machine learning in sustainable smart grid systems. The machine learning ...

Governments around the world are investing heavily in smart energy systems and technologies (SEST) to

ensure optimum energy use and supply, enable better planning for outage responses and recovery, facilitating the integration of heterogeneous technologies such as renewable energy systems, electrical vehicle networks, and smart homes around the grid.

select article Corrigendum to "Quantification of energy flexibility of residential net-zero-energy buildings involved with dynamic operations of hybrid energy storages and diversified energy conversion strategies" [Sustain. Energy Grids Netw. 21 (2020) 100304]

A Case of Thailand Microgrids. The Thailand energy sector has evolved into a modern infrastructure, supporting several national social and economic activities as well as realizing environmental concerns. At a national ...

Following the success of liberalization of various sectors of the economy, electricity markets underwent a similar transition. Vertically integrated utilities were unbundled, and competition in generation and supply was introduced. In this regard, market modelling issues affect different aspects of power system operation and planning. Due to the complex nature of ...

Special Issue on Forecast production and end-use for efficient management of energy systems; Special Issue on FLEX DIST PLAN; Special Issue on Electric Vehicle Management in Multi-Energy Systems; Special Issue on Selected articles from the 2nd International Conference on Energy Transition in the Mediterranean Area (SyNERGY MED 2022) Review Articles

The installation of an RTU560 at each of the 28 substations in MEA's operating region is aimed at enhancing its monitoring and control capabilities and providing connectivity to ensure a stable and reliable power distribution network. As electricity demand in Thailand continues to grow and to enable sustainable economic development, MEA has ...

Thailand's grid will need to modernise its grid with digital technologies so it can deal with varying levels of supply from renewable sources. "When we have more renewable energy, the grid will ...

the grid infrastructure to support a sustainable energy future. This report is a first step in providing guidance on smart grids and renewables for a range of situa-tions--from small islands to large intercontinental grid projects--and outlining the actions required for this ambitious energy transformation to happen.
