

The role of european energy storage stations

What does the European Commission say about energy storage?

The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU's current regulatory, market, and financing framework for storage and identifies barriers, opportunities and best practices for its development and deployment.

Why is energy storage important in the EU?

It can also facilitate the electrification of different economic sectors, notably buildings and transport. The main energy storage method in the EU is by far 'pumped hydro' storage, but battery storage projects are rising. A variety of new technologies to store energy are also rapidly developing and becoming increasingly market-competitive.

What are EU energy storage initiatives?

European Union EU energy storage initiatives are key for energy security and the transition toward a carbon-neutral economy, improving energy efficiency, and integrating more renewable energy sources into electricity systems.

How can energy storage help the EU develop a low-carbon electricity system?

ENER Working Paper The future role and challenges of Energy Storage Energy storage will play a key role in enabling the EU to develop a low-carbon electricity system. Energy storage can supply more flexibility and balancing to the grid, providing a back-up to intermittent renewable energy. Locally, it can improve the manage

What is the EU Regulation on energy storage?

In brief, the EU regulation in respect of energy storage appears to focus on the following: Public support, strategy, and other policy aspects (for more information on EU state aid to energy projects, see Cross-Border Energy Projects in Times of Crisis: Is EU State Aid a Solution for Green Transition?)

Why should EU countries consider the 'consumer-producer' role of energy storage?

It addresses the most important issues contributing to the broader deployment of energy storage. EU countries should consider the double 'consumer-producer' role of storage by applying the EU electricity regulatory framework and by removing barriers, including avoiding double taxation and facilitating smooth permitting procedures.
