

What is a hybrid inverter?

Hybrid inverters are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

Are hybrid inverters a good choice for your solar project?

Hybrid inverters are a solid solution for those solar projects built for multi-purpose, more complex applications. If you desire to take advantage of free and clean solar energy, the cheaper rates of grid power during off-peak hours as well as the resilient power that battery supplies, hybrid inverters can let you do so with ease.

What are the best hybrid inverters?

Sungrow SH-RS series are our favourite hybrid inverters due to their numerous features, wide variety of sizes, high backup power rating, simple design and affordability. The SH-RS series is available from 3.0kW to 10kW and features 200% solar oversizing, a digital display, instantaneous backup power, and high efficiency.

What are the different types of solar inverters?

So, let's explore these common types of solar inverters: Hybrid inverters are versatile and have useful built-in features such as advanced monitoring, extensive customisation options, a built-in Battery Management System (BMS), island mode and Generator port inputs.

How to install a hybrid solar inverter?

Installing a hybrid solar inverter is a job for the pros. It involves: 1. Choosing the right location: Usually indoors, away from extreme temperatures and moisture. 2. Connecting to your solar panels, batteries (if you have them), and your home's electrical system. 3. Setting up monitoring systems and configuring settings.

Which solar inverter is best for your roof?

They're great for complex roof setups but don't deal with battery storage. 3. Battery Inverters: These work with batteries but don't directly connect to solar panels. A hybrid inverter combines the best of all worlds. It can manage your solar panels, work with batteries, and connect to the grid.
