

Internet of Things (IoT) technology has emerged as a promising tool, particularly in the context of Smart Grids, enabling enhanced control, efficiency, and sustainability. This paper aims to ...

Still, both smart grid approaches lead to the same goals, which are: (i) the grid's ability to make decisions on its own; (ii) communication between the grid's parts and actors; ...

For example, smart metering technologies can optimize the grid across the energy value chain by indicating power conditions and outages. This equips grid operators with actionable insights into grid conditions and enables ...

The Kairouan Solar Project, Tunisia's first large-scale solar initiative, significantly boosts the country's renewable energy capacity by providing 100 MW of solar power to the national grid. This initiative, part of ...

There is growing demand for sustainable solutions to the electricity-related environmental pollution, high power system losses, high contribution of fossil fuel sources to grid electricity ...

Performance and feasibility analysis of a grid interactive large scale Wind/PV hybrid system based on smart grid methodology case study south part - Jordan. ... international trade, oil price, and economic growth inter ...

The landmark ELMED project strengthens the World Bank Group's longstanding partnership with the Tunisian government in the energy sector while positioning the country as a regional hub for renewable energy by ...

This study explores the techno-economic feasibility of, both off-grid and on-grid, hybrid renewable energy systems for remote rural electrification in Thala City, located in the highest region of Tunisia, using wind and biomass ...

The landmark ELMED project strengthens the World Bank Group's longstanding partnership with the Tunisian government in the energy sector while positioning the country as ...

The smart grid project of the Tunisian Electricity and Gas Company (STEG) is one of the priorities of Tunisia's energy and climate policy. The aim of this strategy is for the country to reduce its dependence on natural gas imports by ...

The smart grid project of the Tunisian Electricity and Gas Company (STEG) is one of the priorities of Tunisia's energy and climate policy. The aim of this strategy is for the country to reduce its ...

This study explores the techno-economic feasibility of, both off-grid and on-grid, hybrid renewable energy systems for remote rural electrification in Thala City, located in the ...
