

What is America's strategy to secure the energy supply chain?

The report "America's Strategy to Secure the Supply Chain for a Robust Clean Energy Transition" lays out the challenges and opportunities faced by the United States in the energy supply chain as well as the Federal Government plans to address these challenges and opportunities.

Does grid energy storage have a supply chain resilience?

This report provides an overview of the supply chain resilience associated with several grid energy storage technologies. It provides a map of each technology's supply chain, from the extraction of raw materials to the production of batteries or other storage systems, and discussion of each supply chain step.

What is the energy supply chain strategy?

Developed by DOE in response to Executive Order 14017 on America's Supply Chains, the strategy summarizes the crucial elements of the energy supply chain, examines key technologies and crosscutting topics, and includes actions the U.S. government is employing or will soon employ to strengthen domestic clean energy supply chains.

What is grid energy storage & supply chain deep dive assessment?

A Fact Sheet on the larger report - "Grid Energy Storage: Supply Chain Deep Dive Assessment." Developed by FCAB, this document outlines a national blueprint to guide investments to put the U.S. on a path to long-term competitiveness in the global battery value chain.

Why is a secure supply chain important?

The U.S. Department of Energy (DOE) recognizes that a secure, resilient supply chain will be critical in harnessing emissions outcomes and capturing the economic opportunity inherent in the energy sector transition. Potential vulnerabilities and risks to the energy sector industrial base must be addressed throughout every stage of this transition.

What is the largest energy storage resource in 2021?

That's up from a previous record build of 3.7 GW in 2021. At 67%, pumped storage is the largest energy storage resource, with battery and thermal storage accounting for the remainder. Due mainly to growing deployment of large-scale lithium-ion batteries on the grid, pumped hydro's share of U.S. energy storage dropped from 78% in 2021.

Li-Bridge Building a Robust and Resilient U.S. Lithium Battery Supply Chain Key Takeaways In early 2022, the U.S. Department of Energy identified and brought together the leading experts ...

Ben Echeverria is Burns & McDonnell's lead for regulations and compliance in its energy storage division, and in addition to contributing occasional comments for news ...
