

Trina Storage commissioned and tested the 50MW/56.2MWh battery system. Image: Trina Storage. Trina Storage has completed the supply of its first UK battery energy storage system (BESS), the 50MW/56.2MWh fully integrated grid-scale battery energy storage system owned by SMS plc, a smart metering services company which has diversified into the ...

The total planned capacity for energy storage projects in the UK is 85GW/175 GWh, with 20% of this coming from storage capacity co-located with solar sites. Looking at the graph above, the energy storage market saw initial ...

This policy briefing explores the need for energy storage to underpin renewable energy generation in Great Britain. It assesses various energy storage technologies. ... Why is electricity storage needed? Meeting the UK's commitment to reach net zero by 2050 will require a large increase in electricity generation as fossil fuels are phased out ...

Highview Power has secured a £300m (\$383m) investment for its first commercial-scale liquid air energy storage (LAES) plant in the UK. The funding, led by the UK Infrastructure Bank (UKIB) and Centrica, will support the construction of one of the world's largest long-duration energy storage facilities in Carrington, Manchester.

At the beginning of this month, sister site Current¹⁷⁷; reported that another optimiser, Arenko, had been awarded contracts to optimise 455MW of battery storage for UK investor-developer Gresham House Energy Storage Fund, expanding an existing multi-year relationship between the pair. These stories originally appeared as separate items on Current¹⁷⁷;

Energy storage executives from global assurance and risk management provider DNV analyse the UK government's proposal to kickstart investment into long-duration energy storage (LDES). The case for LDES is ...

A decision by UK gas and electricity markets regulator Ofgem's to classify energy storage as a subset of generation must be a "stopgap measure" until parliamentary time is found. This is according to the Renewable Energy ...

Our Mission: Deliver our first UK hydrogen storage site by 2030, supporting the transition to net zero by 2050. UKEn has been diligently working on a £1 billion underground hydrogen storage project in South Dorset for the past four years. This will be the UK's largest, with an envisioned maximum annual capacity of 10 TWh, meeting up to 17% of the UK's forecast ...

Sungrow has announced the signing of a landmark project agreement with Penso Power and BW ESS under which it will deliver a BESS for a 100MW/330MWh energy storage project in Bramley, Hampshire. Among the ...

The UK should not lose out on an opportunity to become a leader in utility-scale BESS (pictured), argues Nick Bradford of Atlantic Green. The UK Battery Strategy is intended as a roadmap to establishing a competitive value chain. As such, it has been welcomed, but falls short in recognising the potential for the battery energy storage system (BESS) sector to make ...

The renewable energy IPP arm of UK utility SSE is to start building a 320MW/640MWh battery energy storage system (BESS), which could be the largest under-construction in the country. The company has taken a final investment decision (FiD) on the Monk Fryston project in Yorkshire, north England, and will now proceed with construction, it said ...

Sungrow has announced the signing of a landmark project agreement with Penso Power and BW ESS under which it will deliver a BESS for a 100MW/330MWh energy storage project in Bramley, Hampshire. Among the highlights of the agreement is the debut of Sungrow's innovative PowerTitan 2.0 liquid cooled ESS, which will be deployed for the first [...]

The Australian Energy Regulator (AER) has said that a delay in new renewable energy and energy storage capacity coming online on the National Electricity Market (NEM) in 2023-24 means the grid ...

A decision by UK gas and electricity markets regulator Ofgem's to classify energy storage as a subset of generation must be a "stopgap measure" until parliamentary time is found. This is according to the Renewable Energy Association (REA), suggesting that defining storage as its own asset class in primary legislation - a solution ...

Other technologies, such as liquid air energy storage, compressed air energy storage and flow batteries, could also benefit from the scheme. Studies suggest that deploying 20GW of LDES could save the electricity system £163.24bn between 2025 and 2050, potentially reducing household energy bills as reliance on costly natural gas decreases.

A new 50MW battery storage site in the UK will be another example of how batteries are benefiting the grid and offering returns for investors, the company behind the project has said. ... the facility, in Essex, England, approved by a local authority. Adjacent to a 132kV substation, the project's battery energy storage system (BESS) will ...
