

How important is energy security in Ukraine?

These attacks on key infrastructure have recently increased and intensified, posing a huge threat to reliable access to power, heating and communications services across Ukraine this winter. This special report lays out 10 key energy actions to reinforce the country's energy security - essential to its security overall - at this critical juncture.

Could renewables be the backbone of Ukraine's electricity system?

In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko /Adobe Stock) In their study, the researchers explain why renewables should take centre stage in the reconstruction of the Ukrainian electricity system.

Could solar power be the backbone of Ukraine's energy system?

The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities. In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko /Adobe Stock)

Why is Ukraine's energy system deteriorating?

Ukraine's energy system has endured two successive winters since Russia's invasion in February 2022. But following a significant escalation of attacks since spring 2024 on power plants, heat plants, transmission networks and more, the country's energy infrastructure is under huge strain.

Can solar power help prevent corruption in Ukraine?

They have determined that solar and wind energy would quickly deliver a distributed power supply system and prevent corruption. The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities.

How has Russia impacted Ukraine's energy system?

Ukraine's energy system has been targeted since Russia launched its full-scale invasion of the country in February 2022. These attacks on key infrastructure have recently increased and intensified, posing a huge threat to reliable access to power, heating and communications services across Ukraine this winter.

"Our study presents the first comprehensive, geospatial mapping of Ukraine's electricity system as it was in February 2022 and its subsequent destruction in the war," Grêt-Regamey says. "We also show ...

Compounding the challenge: Russia's pelting air attacks have left Ukraine mostly reliant on nuclear infrastructure that remains unprotected from missile strikes. And there's not enough time left to fix that. Already, experts are predicting energy rationing that would leave people without electricity for much of the day. Add in a cold snap ...

Hydrogen is an energy carrier that can be used to store, move, and deliver energy produced from other sources. Today, hydrogen fuel can be produced through several methods. The most common methods today are natural gas reforming (a thermal process), and electrolysis. Other methods include solar-driven and biological processes.

Why renewables matter more than ever, and why we need stronger sanctions. German Minister for Economic Affairs and Climate Action, Robert Habeck, rightly pointed out that renewable energy presents a compelling security advantage. Unlike a concentrated nuclear power plant, a vast network of solar panels offers a far less appealing target for attacks.

Ukraine's energy generation by type and share in the system. Source: Energy Community. The International Energy Association (IEA) said that 55 percent of Ukraine's actual pre-war energy production came from nuclear ...

Storage shortfall InterGen's battery facility currently being built on the Thames Estuary will be the UK's largest, with 1 GWh capacity. The UK needs 5 TWh of storage to support renewable-energy targets. (Courtesy: ...

Kyiv, Ukraine - Vitalii, a 44-year-old Ukrainian electrical engineer with a neatly trimmed goatee and a penchant for clever jokes, recalls the terrifying moment he and five colleagues recently ...

Let's see how we store energy in the 21st century. Renewable energy storage solutions. It is much harder to store renewable energy than fossil fuels. Non-renewable energy only needs some "space" to be stored, but green energy is stored in batteries, electric capacitors, magnetic storages - that have a lower efficiency. Read our article ...

"When there is electricity, we charge the batteries so that there is enough power to keep the translators and project managers working during blackouts. So, the first thing we had to splurge on was a portable power station." It chose a BLUETTI AC300 power station with two B300 battery modules. Each module is able to run 20 laptops for four ...

Here are four innovative ways we can store renewable energy without batteries. Giant bricks are not what most people think of when they hear the words "energy storage", but they are a key element of a gravity-based system that could help the world manage an increasing dependence on renewable electricity generation.

Energy storage (ES) is an essential component of the world's energy infrastructure, allowing for the effective management of energy supply and demand. It can be considered a battery, capable of storing energy until it is needed to power something, such ...

In the midst of Russia's continued brutal attacks against Ukraine's energy infrastructure, Secretary of State

Blinken announced today during a meeting of the G7+ on the margins of the NATO Ministerial in Bucharest that the United States government is providing over \$53 million to support acquisition of critical electricity grid equipment. This equipment will be [...]

The National Bank of Ukraine forecasts an average electricity deficit of approximately 5% in 2024-2025, with power losses in the energy system reaching over 20 GW. Despite the challenges posed by the war, Ukraine is conducting a large-scale repair campaign on energy facilities and commissioning new generation facilities.

To start, staff from Ukrenergo are already engaging with the Global Power System Transformation (G-PST) Consortium, which brings together power system operators from around the world to share ideas and solutions for ...

Ukraine passed the winter of 2023-2024 better than expected. Daily electricity exports from Ukraine in early March set a record since the start of the wide-scale invasion. The situation may seem to have eased, but Ukraine's energy sector still faces severe challenges during the rest of 2024. A Look Back at the Winter

in Energy and Resource Economics "We have to become an energy-independent state in full." --Oleksiy Chernishov, CEO Naftogaz Ukraina1 Introduction Ukraine's electricity system faces severe challenges from persistent Russian attacks, which Moscow has significantly intensified in 2024. More than 100 cruise and ballistic
