

What are the different types of energy storage technologies?

The technologies considered in this article are: Underground Gas Storage (UGS), Underground Hydrogen Storage (UHS), Compressed Air Energy Storage (CAES), Underground Pumped Hydro Storage (UPHS) and Underground Thermal Energy Storage (UTES).

What should be considered when evaluating large-scale underground energy storage reservoirs?

Thermal and thermodynamics properties and behaviour of the rocks should also be considered as part of the studies developed when evaluating large-scale underground energy storage reservoirs.

What are the different types of underground thermal energy storage?

There are currently three common types of Underground Thermal Energy Storage ( Fig. 6) [77,78,79 ]: Aquifer Thermal Energy Storage (ATES) is an open-loop energy storage system that uses an aquifer as a storage medium for thermal energy and groundwater as the thermal energy carrier.
