

Does Italy need an efficient energy storage system?

These targets cannot be achieved without implementing an efficient energy storage system in Italy. Italy's growing need for storage systems is particularly evident in Central and Southern Italy, where a large number of renewable energy plants have been installed.

Are energy storage facilities regulated in Italy?

The Italian regulatory framework concerning energy storage facilities has been evolving rapidly in recent years. However, the legislation is relatively fragmented, given the high number of laws governing different aspects of energy storage facilities.

Can energy storage systems be integrated with power production plants?

The integration of energy storage systems with power production plants, especially renewable plants, has been growing rapidly in recent years. This is because the installation of storage systems maximises the efficiency of renewable plants by regulating electricity flow and reducing energy waste and costs.

Which projects have a battery energy storage system been implemented?

Internationally, we have already implemented major projects such as the Tynemouth stand-alone storage system in the UK and the La Caba; a photovoltaic plant in Chile, which is equipped with a Battery Energy Storage System that ensures its efficiency and stability.

Why do energy-intensive storage assets need a mechanism?
