What is a user-side small energy storage device?

With the new round of power system reform, energy storage, as a part of power system frequency regulation and peaking, is an indispensable part of the reform. Among them, user-side small energy storage devices have the advantages of small size, flexible use and convenient application, but present decentralized characteristics in space.

What is the status quo of energy storage functions in smart grids?

The status quo of energy storage functions in smart grids. The functions of the power generation side mainly include fast frequency regulation, the suppression of low-frequency oscillation, automatic generation control, smoothing new energy output fluctuations, new energy output plan tracking, new energy output climbing control, etc.

How is energy storage configured?

The energy storage is configured based on the load data for a total of one year from 1 December 2019 to 30 November 2020. Based on the load characteristics of the example in this paper, energy storage only participates in energy scheduling during working days. There are a total of 252 working days in the selected configuration of energy storage.
