

Electricity is vital for powering homes, industries, transportation, and commercial buildings in today's world [1]. Therefore, the occurrence of power failures within the electrical grid can lead to significant adverse consequences [2]. While fossil fuels power a significant portion of our electricity, their extensive use comes at a steep environmental cost, as their consumption ...

select article Retraction notice to "Accurate prophecy of photovoltaic-segmented thermoelectric generator's performance using a neural network that feeds on finite element-generated data" [Sustainable Energy, Grids and Networks 32 (2022) 100905]

Special Issue on Computational methods applied to multi-energy networks; Special Issue on Selected articles from the 5th International Conference on Smart Energy Systems and Technologies (SEST 2022) Special Issue on Measurement solutions for the decarbonization of power systems; Special Issue on FLEX DIST PLAN

areas of ensuring sustainable energy ... networks, generating capacities, mutual assistance in emergency situations and the rational use of water and energy resources of the region; o principles of cooperation is equal rights, respect for the positions of the parties and the wide use ... -"National Electric Grids of Uzbekistan ...

LONDON, England, Oct. 7 -- The European Union's European Bank for Reconstruction and Development issued the following news: The European Bank for Reconstruction and Development (EBRD) is facilitating a more reliable and sustainable electricity transmission network in Uzbekistan by providing fresh funds to state power transmission company National Electric ...

Kaiser et al. show that by adding new connections network isolators can be created, that can inhibit failure spreading relevant for power grids and water transmission systems. Franz Kaiser, Vito ...

Matteo Patrone, EBRD's Vice President of Banking, highlighted Uzbekistan's role in green energy with a \$65 million investment in a green hydrogen project. This pilot, powered by a 20 MW electrolyser and 52 MW wind plant, aims to replace grey hydrogen and boost sustainable agriculture. Patrone also underscored the importance of battery energy storage ...

Sustainable Energy, Grids and Networks (SEGAN) is an international peer-reviewed publication for theoretical and applied research dealing with energy, information grids and power networks, including smart grids from super to micro grid scales. SEGAN welcomes papers describing fundamental advances ... View full aims & scope

Governments around the world are investing heavily in smart energy systems and technologies (SEST) to

ensure optimum energy use and supply, enable better planning for outage responses and recovery, facilitating the integration of heterogeneous technologies such as renewable energy systems, electrical vehicle networks, and smart homes around the grid.

Uzbekistan energy profile - Analysis and key findings. ... which operate 0.4/6/10/35/110-kV power grids and oversee new construction and reconstruction as well as capital and routine repairs within their developments. ...

The field of smart grids and sustainable transportation is at the forefront of the global energy transition, driven by the urgent need to mitigate climate change and reduce greenhouse gas emissions. Traditional energy models, heavily reliant on fossil fuels, have resulted in the transportation and industrial sectors contributing to approximately 60% of carbon emissions. ...

The operation of multiple microgrids in the interconnected mode promotes sustainable, efficient, and optimal operation [1]. Multi-microgrid systems often incorporate hybrid renewable energy systems, which are more economical and reliable compared to pure renewable energy systems with a single renewable resource.

Uzbekistan has adopted a number of laws related to energy: the Law on the Rational Use of Energy (April 1997); Law E II on Production Sharing Agreements No. 312- (7 December 2001); Law No. 444 -II on Subsoil (13 December 2002); Law No. ZRU- 225

Smart Grids and Sustainable Energy is a journal dedicated to evolving and applying smart grids and sustainable energy systems, focusing on technological, operational, and regulatory aspects. ... Addresses active distribution networks and demand-side management. Includes studies on energy storage systems and smart transmission systems. Executive ...

Uzbekistan 2022 - Analysis and key findings. A report by the International Energy Agency. ... This report is intended to help guide Uzbekistan towards a more secure, sustainable and efficient energy future. It proposes ...

select article Corrigendum to "Quantification of energy flexibility of residential net-zero-energy buildings involved with dynamic operations of hybrid energy storages and diversified energy conversion strategies" [Sustain. Energy Grids Netw. 21 (2020) 100304]
