

Will South Korea buy 750-megawatt offshore wind project?

Norwegian energy company Equinor has received an offer from the South Korean government for a fixed-price power purchase agreement for a 750-megawatt (MW) floating offshore wind project, the company said on Thursday.

Does South Korea have a high energy cost?

South Korea's heavy reliance on fossil fuels has historically led to high electricity costs, as seen during the global energy crisis in 2022. South Korea aims to mitigate these issues by diversifying its energy sources and enhancing energy efficiency across industries.

How much electricity will South Korea consume in 2036?

South Korea's Ministry of Trade, Industry and Energy's (MOTIE) 10th Basic Energy Plan for Electricity Supply and Demand (released in January 2023) has projected electricity consumption to reach 597.4 TWh by 2036 from around 533 TWh in 2021. This is driven by increased demand from data centers and increased electrification.
