

Does Venezuela have a good water supply?

Water supply and sanitation in Venezuela is currently limited and many poor people remain without access to piped water. Service quality for those with access is mixed, with water often being supplied only on an intermittent basis and most wastewater not being treated.

How much does a bottle of water cost in Venezuela?

Clean water in Venezuela has become a luxury, and even with price controls set in place, a bottle of water is about \$3, a significant portion of the country's minimum wage of approximately \$8 a month. Venezuela's water crisis also impacts wastewater collection, sanitation, control over sewage, and farmer's access to water for irrigation.

Do Venezuelans have access to safe drinking water?

After years of economic and political crisis, Venezuelans have been facing extreme difficulties in obtaining basic services such as electricity and water supply. According to an investigation by Transparency International, only 18% of the Venezuelan population has access to safe drinking water.

Does Venezuela have clean water?

Despite ranking as one of the world's top 15 countries in renewable fresh water resources, nearly 8 out of 10 Venezuelans do not have continuous access to clean drinking water and basic sanitation. For most citizens, the water they sporadically consume is of dubious quality or not drinkable.

Can you afford water in Venezuela?

Those who buy water through formal or informal vendors must pay exorbitant fees in relation to wages. Many just can't afford it. At least half of Venezuela's population lives in poverty. The homes that cover a steep hill in this corner of Petare once had running water.

How much money does Venezuela invest in water and sanitation?

Historical investment levels There are no recent data on the level of investments in the sector. In the five years between 1997 and 2001 Venezuela invested US\$637 million in water and sanitation, or about US\$127 million annually on average. Investment in the sector has historically been volatile.

Overview Access Service quality Water use History and recent developments Responsibility for water supply and sanitation Economic efficiency Financial aspects Water supply and sanitation in Venezuela is currently limited and many poor people remain without access to piped water. Service quality for those with access is mixed, with water often being supplied only on an intermittent basis and most wastewater not being treated.
