

What is a villagrid energy storage system?

The VillaGrid energy storage system is complementary to home solar panels which charge the battery. As homeowners face rising electricity rates, unplanned power outages and Public Safety Power Shutoffs, the VillaGrid can help them reduce their electric bills and better endure blackouts.

How much power does a villagrid use?

The VillaGrid comes in two sizes, 5.75 and 11.5 kilowatt-hours (kWh). Two important metrics to keep in mind when comparing the VillaGrid to other home storage options are power and usable capacity.

Is villagrid a good battery?

The VillaGrid is the industry's first lithium titanate (LTO) home battery, with power, safety, and longevity as the core of its purpose. With its long warranty and extended battery life, coupled with the ability to work in extreme weather conditions, it's a great option if you're considering installing a home storage system.

What is a villagrid & how does it work?

The VillaGrid represents a quantum leap forward in home battery technology. It delivers double the power of leading competitors, enough to start up large air conditioners. The VillaGrid is also far more efficient, with less than half the energy loss of competitors, turning more of a homeowner's solar power into usable electricity.
