How does MCH work?

In MCH's case, the organic chemical toluene is used as the base commodity which is then reacted with hydrogen to produce MCH. After the initial hydrogenation step, the energy carriers are transported by truck to an integrated facility "near a region where demand has outstripped the load capacity of transmission lines."

What are ammonia & MCH?

Ammonia and MCH are two of the three hydrogen vectors that were studied by the Energy Carriers initiative within the Government of Japan's Strategic Innovation Promotion Program between 2014 and the first quarter of 2019. (Liquid hydrogen is the third.)

How is MCh made?

The design starts with the production of hydrogen by electrolysis at a location close to a solar or wind farm. In ammonia's case, synthesis is via the Haber-Bosch process. In MCH's case, the organic chemical toluene is used as the base commodity which is then reacted with hydrogento produce MCH.

How to store hydrogen using toluene-MCH cycle?

In addition, in hydrogen storage using toluene-MCH cycle, the hydrogen must be hydrogenated with the toluene at the production side (exothermic) and dehydrogenated from the MCH at the utilization side (endothermic). The released hydrogen from MCH must be purified in case that high purity of hydrogen is demanded (such as fuel cell).

Why is LOHC a good choice for long-distance and large-scale hydrogen storage?

Among them,LOHCs technology is recognized to be excellent for long-distance and large-scale hydrogen storage and transportation due to its high hydrogen storage capacity,environmental friendliness,safety,and efficiency ,.

Is liquid hydrogen a viable alternative to MCH & ammonia?

However, in case that highly pure hydrogen (such as for fuel cell) is demanded, liquid hydrogen looks to be promising (24-25 JPY/Nm 3 -H 2 in 2050), compared to MCH and ammonia with decomposition and purification.

method has very low energy loss in long-term storage. In addition, since toluene and MCH do not chemically change under ambient conditions, this method is suitable for long-term and large ...
