

# Where to find energy storage subsidy policies

Do states need a new energy storage policy?

As states increasingly declare decarbonization goals, they will need to create new policies, rules and regulations that will enable the deployment of an unprecedented amount of energy storage, according to the Clean Energy States Alliance (CESA), which just released its States Energy Storage Policy: Best Practices for Decarbonization report.

Does state energy storage support decarbonization?

A recent report from the Clean Energy States Alliance highlights best practices, identifies barriers, and underscores the need to expand state energy storage policymaking to support decarbonization in the United States. Decarbonization is the move away from fossil fuel resources and toward renewable energy.

Which states have set policy for energy storage deployment?

At the time the study was conducted, 22 states (plus the District of Columbia) adopted decarbonization goals, however, not all have set policy for energy storage deployment. California and New York are cited as examples of states with "very advanced and sophisticated policy measures". Many others are beginning to assess energy storage policy needs.

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

Which states have a 'maturity level' of storage policy development?

The report outlines the four steps to policy development from Level 1, which is demonstrated interest in storage up to the fourth "maturity level" of including storage in strategic plans, and ranks the states by level of maturity. California, Connecticut, Maine, New Jersey and New York had all achieved Level 4.

CEG provides information, technical guidance, policy and regulatory design support, and independent analysis to help break down the numerous barriers to energy storage deployment, from information gaps to ...

The Future Made in Australia Act, likely to be a pillar of next month's budget, is designed to build local industries focusing on the clean energy transition including renewable ...

## Where to find energy storage subsidy policies

Energy storage is a technology with positive environmental externalities (Bai and Lin, 2022). According to market failure theory, relying solely on market mechanisms will result ...

A recent report from the Clean Energy States Alliance highlights best practices, identifies barriers, and underscores the need to expand state energy storage policymaking to support decarbonization in the United States.

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, ...

Battery energy storage systems ("BESS") are playing an increasingly important role in the transition towards net zero. This briefing note focuses on (a) key differences between the FIT ...

Clean Energy Group provides support to and collaborates with state and federal agencies, policymakers, nonprofit advocates, utilities, regulatory agencies, energy industry experts, and community-based organizations to ...

The Qinghai energy storage subsidy policy will provide some alleviation to the cost challenge of deploying storage with renewables. Li Zhen, deputy secretary-general of the ...

Our study finds that energy storage can help VRE-dominated electricity systems balance electricity supply and demand while maintaining reliability in a cost-effective manner -- that in turn can support the ...

We roughly divide national energy storage policies into two key categories: ... (VAT) and income tax on power generation income related to residential energy storage systems. 2) Subsidies. In 2013, the German government announced it ...

Furthermore, the study analyzes China's local policies from the aspects of energy planning during the "13th Five-Year Plan" period, operation rules for the peak regulation auxiliary market, local ...

We roughly divide national energy storage policies into two key categories: ... (VAT) and income tax on power generation income related to residential energy storage systems. 2) Subsidies. In ...

Incentives shall include Capital Subsidies, SGST reimbursements, power tariff subsidies, etc. b) ... and Energy Storage Policy 2020 - 2030 to incentivize usage of Electric Vehicles in the state of ...

The subsidy covers part of the cost of introducing renewable energy facilities, facilities to utilize unused energy, cogeneration systems (CGS) and their ancillary facilities (energy storage, charging/discharging
