

How much power do you need for a home backup generator?

You will likely need at minimum a 10,000 Watt or 10kW generator to power a whole house. There are portable generators, that are cheaper than stationary home backup generators, in the 10,000 and 15,000 watt range. But likely, if you want a true home backup generator system, you will want a stationary generator in the 16,000kW and higher range.

Should you buy a whole house or home standby generator?

One of the biggest reasons that most people buy a whole house or home standby generator is to have a backup power source in the event of a power outage or blackout. Generators can help power up all types of electronics, appliances, and tools to ensure you are keeping your family safe and comfortable until power returns.

Can a generator power a whole house?

Large whole-house generators can power an entire average home, while smaller units provide power for key appliances. These are the best standby models from CR's tests.

Should you buy a whole-house generator?

If you decide to take the plunge for a whole-house generator, given your investment in installation, you'll want a unit that performs well, which is where our ratings come in. "A home standby generator does a great job of supplying backup power during an outage," says Dave Trezza, a test engineer who heads CR's generator testing program.

How long does a whole house generator take to restore power?

Sometimes, it takes more than a week for power to be restored. Luckily, we've found the 6 best whole house generators, so that you won't have to worry about finding yourself off the grid. Buying a whole house generator requires you to pay close attention to such specifications as the fuel type, power output, ease of installation and maintenance.

Is a whole-house generator better than a portable generator?

Learn more. Whole-house generators are more expensive than portables, but they provide convenient backup power, allowing you to get through outages and weather emergencies with less trouble.
