

Can pumped hydroelectric energy storage maximize the use of wind power?

Katsaprakakis et al. studied the feasibility of maximizing the use of wind power in combination with existing autonomous thermal power plants and wind farms by adding pumped hydroelectric energy storage in the system for the isolated power systems of the islands Karpathos and Kasos located in the South-East Aegean Sea.

What is pumped hydroelectric energy storage (PHES)?

Concluding remarks An extensive review of pumped hydroelectric energy storage (PHES) systems is conducted, focusing on the existing technologies, practices, operation and maintenance, pros and cons, environmental aspects, and economics of using PHES systems to store energy produced by wind and solar photovoltaic power plants.

How pumped hydroelectric energy storage system integrated with wind farm?

Pumped hydroelectric energy storage system integrated with wind farm . Katsaprakakis et al. attempted the development of seawater pumped storage systems in combination with existing wind farms for the islands of Crete and Kasos.

Can wind energy be combined with hydro energy storage?

Combining wind energy with pumped hydro energy storage (PHES) can overcome the intermittency in supply associated with wind energy : during periods of low demand the electricity produced by wind turbines can be used to pump water from a lower reservoir to an upper reservoir where the energy is stored as water.

Is pumped hydro energy storage a viable solution?

Pumped Hydro Energy Storage is a relatively obscure technology and is a promising solution to overcome such problems. This paper aims to analyze the viability of this technology when used together with the dominant renewable implementations in the energy sector, which are solar and wind.

Why is integrating wind power with energy storage technologies important?

Volume 10, Issue 9, 15 May 2024, e30466 Integrating wind power with energy storage technologies is crucial for frequency regulation in modern power systems, ensuring the reliable and cost-effective operation of power systems while promoting the widespread adoption of renewable energy sources.
