

What is a hybrid wind-solar energy system?

A hybrid wind-solar energy system consists of the following components: These hybrid systems operate off-grid, so you can't rely on an electricity distribution system in an emergency. A bank of batteries provides backup power for those wind-still, overcast days, or you can incorporate an existing emergency generator into the system.

What is a hybrid solar-wind energy system?

By taking this hybrid approach, you gain an energy system that's considerably more reliable than the US electric grid. The charge controller within a hybrid solar-wind energy system provides a properly managed and consistent energy flow which isn't always possible with traditional energy sources.

Does Blue Pacific Solar offer a hybrid energy system?

Blue Pacific Solar has a range of stand-alone hybrid energy systems available, each of which includes a standard Primus wind generator with a built-in charge controller, a pre-built power center, and a varying number of 300W solar panels.

Will a hybrid charge controller work on a wind turbine?

Many charge controllers are made specifically for wind turbines or solar panels and will not work when installed with the incorrect infrastructure. A hybrid charge controller will allow you to charge batteries from both your turbines and panels.

What is a charge controller in a hybrid solar-wind energy system?

The charge controller within a hybrid solar-wind energy system provides a properly managed and consistent energy flow which isn't always possible with traditional energy sources. Renewable energy systems are easy and cheap to maintain.

How much does a hybrid energy system cost?

Although a hybrid energy system will save you money on your electricity bills, the upfront cost is pretty steep. The best hybrid wind-solar systems can cost anywhere between \$1800 and \$11,000, depending on your energy requirements. In many instances, these prices don't include batteries or installation.
