

What is the production technology of electrical machine windings?

The production technology of electrical machine windings always seeks for easily produced solutions with higher performance and lower cost. The manufacturing of machine windings basically depends on three main factors which are the electrical conductors, thermal and mechanical properties .

How to reduce power losses in electrical machine windings?

Since the major part of the power losses is generated in the machine winding ,it is important to limit these losses by the adoption of innovative winding topologies and improved thermal management. The production technology of electrical machine windings always seeks for easily produced solutions with higher performance and lower cost.

What is filtration winding?

Conclusion Filament winding is an effective fabrication technique for creating cylindrical composite structures such as tubing, chemical and fuel storage containers. Asymmetric components like tee pipes, elbows can also be effectively made.

How are machine windings cooled?

In [90,91], the machine windings are directly cooled using 3D printed ceramic heat exchangers as shown in Figure 22. By occupying the unused space between the double layer concentrated windings, the power density of electric machines is increased without impacting the electromagnetic design.

How does a winding device work?

The winding process is performed by manually turning the handle, and a constant tension during winding is applied by gravity. The physical equipment of the winding device and the tension sensor is shown in Fig. 6. The tension sensor is manufactured by Sensor Systems Engineering Co., Ltd. and the model number is JZHL-3.

How many axes can a hoop Winder wind?

The Econo-Winder is the base model for hoop winding, the compact Ultra-Winder for helical winding, and the Multi-Axis Wind module can wind up to 6-axes at once are examples of MVP winders . Pultrex focuses on the aerospace field, with machines entirely CNC with controlled motion between 2 and 6-axes.
