

On the morning of August 28th, a Foundation Stone Laying Ceremony for Yangjiang LNG Peak-shaving Storage Project was held. Wen Zhanbin, Mayor of Yangjiang, Chen Ji, Vice-mayor of ...

In the last few years, several investigations have been carried out in the field of optimal sizing of energy storage systems (ESSs) at both the transmission and distribution levels. Nevertheless, most of these works make ...

Over the last decade, the battery energy storage system (BESS) has become one of the important components in smart grid for enhancing power system performance and reliability. This paper ...

With the increase of peak-valley difference in China's power grid and the increase of the proportion of new energy access, the role of energy storage plants with the function of "peak ...

There is currently a large federal effort to decarbonize the country's electrical grid as part of the clean energy transition. The elimination of fossil fuel fired systems, and their ...

"Behind-the-Meter" is a term that describes the parts of an energy supply system which come after a building's electrical meter. BTM systems, like battery storage or microgrids, are ...

Demand Flexibility Initiatives for Peak Shaving. Peak shaving, combined with demand flexibility initiatives like EV managed charging, demand response, and virtual power plants, presents a compelling solution for utilities ...

Energy storage can facilitate both peak shaving and load shifting. For example, a battery energy storage system (BESS) can store energy generated throughout off-peak times and then discharge it during peak times, aiding in both peak ...
