

Oracle ZFS Storage: THE Choice for Oracle Workloads and MoreThe ZS9-2 is the only storage system that can provide an all Oracle solution connecting servers,appliances,and storage at 100GbE,including the recently announced Oracle Exadata X9M,the fastest and most available platform to run Oracle Databases.

The high performance of Oracle ZFS Storage ZS9-2 is combined with Oracle Storage Drive Enclosure DE3-24C, Oracle Storage Drive Enclosure DE3-24P, and Oracle Storage Drive Enclosure DE3-24P All-Flash for multiple storage options. In addition to the above improvements, NVMe SSDs for system boot drives can help boost patch downloads.

When configured across OCI Fault Domains, an enterprise's storage accessibility can be maintained with a higher degree of reliability than ever before. For those without the need for high availability, the free Oracle ZFS Storage image also remains available in OCI Marketplace.

ZFS Storage in OCI has been popular for its support of NFS and SMB workloads, its analytic reporting, Active Directory and LDAP authentication, its OCI-compatible object store, and its snapshot and replication capabilities.

The OS8.8.0 release is required for the ZS7-2 controllers, but is also available for download for the following Oracle ZFS Storage Appliance platforms: ZS5-4, ZS5-2, ZS4-4, ZS3-4, ZS3-2, 7420 and 7320. See Oracle ZFS Storage Appliance: Software Updates (Doc ID 2021771.1) available on MOS for more details.

For customers looking to expand disk capacity, the ZS9-2 uses the 18TB HDD to push the maximum storage capacity to a beefy 21PB. Configurations Optimized for Your Environment, Preconfigured to Speed Implementation
